Course Description: Basic theories of micro (or individual) economic units; the theory of consumer demand, the firm, and distribution; pricing and production in competitive, monopolistic and oligopolistic industries.

Learning Objectives: This course is an introductory study of market mechanisms in allocation of productive resources. Topics include the study of opportunity costs, gains from trade, supply and demand, surplus and efficiency, elasticity, costs of production, perfect competition, monopoly, oligopoly, monopolistic competition, and government policies. In addition, we will discuss applications of the economic concepts to selected present day issues in our society. By the conclusion of this course, students should be able to frame everyday events in an economic context; understand the importance of incentives and trade-offs and be able to use basic economic models to address many issues in our daily lives.
